

1.)

block - when full line occupy, is called block line element.

Ex - `<h1>`, `<p>`, `<div>`

Inline - only cover the text space, is called inline element.

Ex - ``, `<i>` all format tags

2.)

href

src

It is attribute of anchor tag `<a>`

It is attribute of image tag ``

3.)

`<a>` - It is provide clickable.

`` - ~~image~~ inside `` we will be past image.

`<pre>` - It provide as poem format.

`<div>` - like a container.

`` - It is used only to let pass

`<hr>` - It is provided horizontal line

`
` - It is break the line.

④

id :- Every id need new different name.

Ex- `<h1 id=hadName>` `<h2=inptHeading>`

class :- we can all class only one name.

⑤

Creating list :- we can used two tags for creating list. OL, UL

UL - unordered list
Ex →
• ~~Nam~~ Rice
• Chikan
• Dal

OL - ordered list
1. Rice
2. Chikan
3. Dal

⑥

```
<div>
  <table>
    <th> product name </th>
    <th> Price </th>

    <td> Rice </td>
    <td> 200 </td>
  </table>
```

```
</div>
```

Ram text is a boy
``

⑦

- ` Ram ` is a boy

```
<style>
  span { background-color: red; } </style>
```

8 generate list of student in no :-

```
<ol>
  <li> Salman </li>
  <li> Majid </li>
  <li> Sohail </li>
  <li> Arjun </li>
</ol>
```

9 poem with only one tag :-
Ans → with the help of pre tags
(`<pre>`).

10 Attribute :-
`<a>` ~~``~~ - att href " " alt = " "
`` - src " " alt = " "
`<h1>` - style

11 ~~`<input>`~~

Take of date of birth of form?

`<label for "inpName box"> D.O.B </label>`

`<input type = "text" id = inpName box>`

How we can identify HTML5 element?

12. Ans → with the help of `<!DOCTYPE>`
we can identify.
